

# CRYO-TREATED C15 HEAD BOLTS - COOL ENOUGH TO GIVE YOU CHILLS!

## Introducing IPD's first cryo-treated part that will extend the life of your engine

We are happy to announce that we are now offering a cryo-treated C15 head bolt kit (C15CHBKFR). What makes cryo-treating so special? Cryogenic heat treatment is a precisely engineered process of taking materials down to approximately -310° F, keeping them at that temperature in liquid nitrogen to remove residual stresses, and then ramping temperature back to room temperature, followed by a mild heat treatment process. The end result is a considerably longer life bolt with less internal stress and optimized tensile strength. IPD's cryo-treated C15 head bolts are designed to ensure proper and even clamping forces across your cylinder head and keep your engine running.

### C15CHBKFR – Cryo-Treated C15 Head Bolt Kit contains:

- 16 of the 1241855 bolts
- 10 of the 7N1961 bolts
- 26 of the 5H1504 hardened washers

These parts are made in the USA and cryo-treated in the USA.

All IPD Parts are subjected to our rigorous quality control and inspection process led by our in-house Quality Assurance team.

IPD cryo-treated head bolts do not require any extra torquing – stretching does not occur!

Each bolt is packaged in its own netting to prevent abrasions.

Each cryo-treated head bolt has a blue dot on its head so that you know it's been cryo- treated.

If you are interested in purchasing IPD Cryo-treated C15 head bolts, you can order through IPDNet at [store.ipdparts.com](http://store.ipdparts.com), or you can contact your IPD customer service representative or call 310-530-1900.
